

Planning and Deploying SAP on Azure (AZ-120T00)

COURSE OVERVIEW

This course teaches IT Professionals experienced in SAP solutions how to leverage Azure resources that include deployment and configuration of virtual machines, virtual networks, storage accounts, and Microsoft Entra ID that includes implementing and managing hybrid identities. Students of this course will learn through concepts, scenarios, procedures, and hands-on labs how to best plan and implement migration and operation of an SAP solution on Azure. You will receive guidance on subscriptions, create and scale virtual machines, implement storage solutions, configure virtual networking, back up and share data, connect Azure and on-premises sites, manage network traffic, implement Microsoft Entra ID, secure identities, and monitor your solution.

WHO WILL BENEFIT FROM THIS COURSE?

This course is for Azure Administrators who migrate and manage SAP solutions on Azure. Azure Administrators manage the cloud services that span storage, networking, and compute cloud capabilities, with a deep understanding of each service across the full IT lifecycle. They take end-user requests for new cloud applications and make recommendations on services to use for optimal performance and scale, as well as provision, size, monitor and adjust as appropriate. This role requires communicating and coordinating with vendors. Azure Administrators use the Azure Portal and as they become more proficient they use PowerShell and the Command Line Interface.

COURSE OBJECTIVES

Students will learn to:

- Explore Azure for SAP workloads
- Discover common terms and meanings for SAP on Azure
- Identify SAP-certified configurations
- Examine SAP NetWeaver with AnyDB on Azure virtual machines
- Examine SAP S/4HANA on Azure virtual machines
- Explore Azure for SAP compute
- Explore Azure for SAP networking
- Explore Azure for SAP storage
- Explore Azure for SAP databases
- Explore identity services for SAP on Azure
- Explore remote management for SAP on Azure
- Explore governance and manageability for SAP on Azure
- Deploy single-instance implementations of SAP on Azure (2-tier and 3-tier)
- Implement high availability in SAP NetWeaver with AnyDB on Azure virtual machines
- Implement high availability for SAP workloads in Azure
- Implement disaster recovery for SAP workloads in Azure

- Perform backups and restores for SAP workloads on Azure
- Use the planning and deployment checklist for SAP workloads on Azure
- Explore migration options for SAP on Azure
- Migrate very large databases (VLDB) to Azure for SAP
- Explore monitoring requirements of Azure for SAP workloads
- Configure the Azure Enhanced Monitoring Extension for SAP
- Explore licensing, pricing, and support for SAP on Azure virtual machines

COURSE OUTLINE

Module 1: Explore Azure for SAP workloads

- Discover the SAP and Microsoft partnership.
 - Explore your options with SAP on Azure.

Module 2: Discover common terms and meanings for SAP on Azure

- Discover common terms and meanings for SAP, Azure and SAP deployments on Azure.

Module 3: Identify SAP-certified configurations

- Explore general prerequisites for SAP support in public cloud environments.
 - Discover SAP certifications and configurations running on Microsoft Azure.

Module 4: Examine SAP NetWeaver with AnyDB on Azure virtual machines

- Explore SAP NetWeaver with AnyDB on Azure virtual machines and learn to recognize the architecture's components.
 - Examine a sample functional workflow.

Module 5: Examine SAP S/4HANA on Azure virtual machines

- Explore SAP S/4HANA on Azure virtual machines and learn to recognize the architecture's components.
 - Examine a sample functional workflow.

Module 6: Explore Azure for SAP compute

- Plan for implementing SAP solutions.
 - Explore Azure virtual machines.
 - Examine Azure virtual machine compute considerations.
 - Implement and verify high availability SAP HANA on Azure virtual machines.

Module 7: Explore Azure for SAP networking

- Explore Azure virtual networks.
 - Examine Azure virtual machine networking considerations.
 - Examine load balancing considerations.
 - Explore virtual network connectivity.
 - Explore cross-premises connectivity.

Module 8: Explore Azure for SAP storage

- Explore Azure Storage types.
 - Examine general database sizing.
 - Examine SAP HANA Azure virtual machine storage configurations.
 - Explore solutions with Premium Storage and Azure Write Accelerator for Azure M-Series virtual machines.
 - Examine sizing for HANA databases on Azure NetApp Files.

Module 9: Explore Azure for SAP databases

- Explore database support of Azure for SAP workloads.
 - Explore storing database files directly on Azure Blob Storage.
 - Explore Azure virtual machine and blob storage security.
 - Examine SQL Server and Oracle recommendations.

Module 10: Explore identity services for SAP on Azure

- Define Active Directory Domain Services (AD DS)
 - Define Azure Active Directory (Azure AD)
 - Discuss Azure Active Directory Domain Services (Azure AD DS)

Module 11: Explore remote management for SAP on Azure

- Consider remote management of Azure virtual machines.
 - Set up the Azure connector for SAP Landscape Management.
 - Explore access management.

Module 12: Explore governance and manageability for SAP on Azure

- Explore Azure Resource Manager and Azure Resource Manager templates.
 - Examine role-based access control and Azure Policy.
 - Explore security and compliance services.

Module 13: Deploy single-instance implementations of SAP on Azure (2-tier and 3-tier)

- Explore deployment methodologies.
 - Deploy via Azure Resource Manager templates.
 - Prepare Azure virtual machines for a manual installation of SAP HANA.
 - Implement SAP HANA scale-out.

Module 14: Implement high availability in SAP NetWeaver with AnyDB on Azure virtual machines

- Examine single SID 3-tier SAP NetWeaver high availability AnyDB deployment.
 - Examine multi-SID 3-tier SAP NetWeaver high availability AnyDB deployment.
 - Set up a Windows Server failover cluster for an SAP ASCS-SCS instance.
 - Examine Installation of SIOS DataKeeper Cluster Edition for the SAP ASCS-SCS cluster shared disk.

Module 15: Implement high availability for SAP workloads in Azure

- Explore high availability and disaster recovery support of Azure for SAP workloads.
 - Examine principal architectures.
 - Determine latency between Azure virtual machines across Availability Zones.

Module 16: Implement disaster recovery for SAP workloads in Azure

- Explore disaster recovery of SAP workloads.
 - Combine availability within one region and across regions.
 - Explore site recovery.
 - Implement disaster recovery for SAP deployments across Azure regions with Azure Site Recovery.

Module 17: Perform backups and restores for SAP workloads on Azure

- Explore backup and restore of Azure virtual machines.
 - Explore application backup.
 - Explore SAP HANA backup.
 - Explore Oracle backup.
 - Explore SQL Server backups

Module 18: Use the planning and deployment checklist for SAP workloads on Azure

- Examine the SAP workload planning and deployment checklist.
 - Explore the phases from project preparation and planning, and through the Go Live and post production phases.

Module 19: Explore migration options for SAP on Azure

- Analyze strategies for migrating SAP systems to Microsoft Azure.
 - Compare classical migration options.
 - Explore downtime-optimized migration.

Module 20: Migrate very large databases (VLDB) to Azure for SAP

- Explore very large database migration.
 - Learn best practices for optimizing the source system, network upload, and the target system.
 - Examine very large database migration best practices.

Module 21: Explore monitoring requirements of Azure for SAP workloads

- Examine monitoring, logging, and alerting services.
 - Explore Azure Monitor and Log Analytics.
 - Explore operating system and workload updates for Azure virtual machines.

Module 22: Configure the Azure Enhanced Monitoring Extension for SAP

- Explore the Azure Enhanced Monitoring Extension for SAP.
 - Configure the Azure Enhanced Monitoring Extension for SAP.

Module 23: Explore licensing, pricing, and support for SAP on Azure virtual machines

- Learn how to price Azure virtual machine-based solutions.
 - Explore licensing, pricing, and support of Azure for SAP workloads.

WHY TRAIN WITH SUNSET LEARNING INSTITUTE?

Sunset Learning Institute (SLI) has been an innovative leader in developing and delivering authorized technical training since 1996. Our goal is to help our customers optimize their technology Investments by providing convenient, high quality technical training that our customers can rely on. We empower students to master their desired technologies for their unique environments.

What sets SLI apart is not only our immense selection of trainings options, but our convenient and consistent delivery system. No matter how complex your environment is or where you are located, SLI is sure to have a training solution that you can count on!

Premiere World Class Instruction Team

- All SLI instructors have a four-year technical degree, instructor level certifications and field consulting work experience
- Sunset Learning has won numerous Instructor Excellence and Instructor Quality Distinction awards since 2012

Enhanced Learning Experience

- The goal of our instructors during class is ensure students understand the material, guide them through our labs and encourage questions and interactive discussions.

Convenient and Reliable Training Experience

- You have the option to attend classes live with the instructor, at any of our established training facilities, or from the convenience of your home or office
- All Sunset Learning Institute classes are guaranteed to run – you can count on us to deliver the training you need when you need it!

Outstanding Customer Service

- You will work with a dedicated account manager to suggest the optimal learning path for you and/or your team
- An enthusiastic student services team is available to answer any questions and ensure a quality training experience
